

Self-service pet washing machine

A. Product Overview

In the midst of a busy life, giving pets a bath has become a headache for many pet owners. Our self-service pet bathing machine is specifically designed to solve this problem, making pet bathing both easy and fun. Whether it's a long-haired dog with matted fur or a mischievous and active cat, this machine can handle the situation perfectly.

B. Core Functions

- **Lifting Bathtub Design:** The height of the pet bathing bathtub can be adjusted according to the owner's height. The foot pedal is used to adjust the lifting function, allowing it to be set at a comfortable height, which makes it convenient to wash and care for beloved pets.
- **Intelligent Operation:** It is equipped with an intelligent operating system, which can independently adjust the water temperature, water pressure, and the temperature and power of the wind according to customers' needs. This avoids the situation where the wind and water are too hot and cause scalds, or too cold and make pets catch a cold, ensuring that every bath is warm and comfortable. Pet owners only need to select the function buttons to activate the corresponding functions for washing and caring for their pets.
- **Automatic Shampoo Generation:** It has a built-in high-quality bath liquid container that can automatically mix water and bath liquid in proportion to generate delicate and rich foam. The abundant foam can penetrate deep into the fur, providing strong cleaning power and being easy to rinse off, reducing the irritation of chemical residues to the pet's skin.
- **Disinfection Function:** Atomized disinfection is used to comprehensively sterilize and disinfect the bathtub, taking good care of the health of beloved pets.

Product Description

- **Dual Blower Design:** The device adopts a dual blow-drying design, with two built-in hair dryers, which can reduce the blow-drying time.

C. Product Advantages

- **Meet the Needs:** With the development of the pet market and the increasing requirements of pet owners for pet care, the self-service pet bathing machine, as a new type of bathing method, is gaining more and more favor among pet owners.
- **Convenient and Time-saving:** Compared with the traditional bathing method, pet owners can avoid the trouble of cleaning the house after giving their pets a bath at home. They can come and use the machine whenever they want. The operation is simple and convenient, and the charging is reasonable.
- **Enhance Comfort:** The humanized design and intelligent operation can reduce pets' resistance and fear of bathing, making bathing a comfortable experience.
- **Customized Functions:** Functions can be customized according to local market demands, including customized payment methods, customized system software, customized styles, customized colors, and customized materials, etc.

D. Usage Process

- **Preparation Stage:** Activate the disinfection function for 2 to 3 minutes as needed to put the entire bathing bathtub into the atomized disinfection mode. After disinfection, wait until the disinfection mist dissipates. Then, the pet owner leads the pet into the dedicated bathing bathtub, fastens the leash, and closes the bathtub door.

Product Description

- **Select the Mode:** Through the function buttons of the pet bathing device, select the washing and care function buttons one by one according to the owner's needs, and start the functions.
- **Independent Bathing:** For the clean water function, the water temperature can be adjusted on the panel as required. The shower head is equipped with a soft combing brush, which can rinse the pet and comb its fur at the same time.
- **Shampoo Function:** Press the corresponding function button. When the shower head is turned on, the well-proportioned shampoo will automatically come out. The temperature adjustment method is the same as that of the clean water function and can be adjusted on the panel. After applying the shampoo, rinse it off with clean water. You can use the towel provided on the site or the towel brought by the owner to dry the moisture on the pet's body.
- **Blow-drying Function:** Press the blow-drying function button, adjust the wind power and wind temperature on the panel, and then dry the pet. You can also turn on the auxiliary hair dryer on the panel. With dual blowers, the efficiency is higher.
- **Release the Pet after Finishing:** After the washing is completed, press the settlement button to complete the washing and care process. The owner opens the bathtub door and releases the pet.
